

AppSense DataNow

Release Notes (Version 4.1 Appliance Update 1)

These release notes include:

- [Components in this Release](#)
- [Important Upgrade Information](#)
- [Bugs Fixed](#)
- [Known Issues and Limitations](#)
- [Supported Operating Systems and Technologies](#)
- [Required Utilities and Components](#)
- [Further Help and Information](#)

Components in this Release

Component	Version
Appliance Plugins	4.0.2.17
Appliance Configuration Services	4.0.2.10
Appliance Operating System	20160926
Server	4.1.0.179

Important Upgrade Information

Upgrade path

DataNow 4.1 is deployed by patching any existing 4.0 DataNow Appliance. The upgrade path from DataNow 3.x is a configuration backup and restore to new DataNow 4.0 appliance and then patch to 4.1.

Windows XP Support

Customers can use DataNow with In-Location Sync to migrate all users profile data from an XP endpoint to a new device. DataNow 4.1 server supports a DataNow 4.0 Windows client. Windows XP does not support additional features such as shared map points, mapped drives, and interacting with ghost files.

Bugs Fixed

The following customer bugs have been fixed in this release:

Problem	Description
13526	DataNow intermittently marks all map points as offline
13393	PCI scan warnings with supporting TLSv1.0

The following issues have been fixed in this release:

TFS ID	Description
206695	Removed support for TLSv1.0
215110	Appliance reboot while patching causes patching to fail
215140	Security Update 5 changes are removed when upgrading to 4.1
216075	SMB library may remove wrong transport on connection timeout
216079	SMB library may remove valid transports from the cache and trigger re-initializations unnecessarily that may result in socket leaks

Known Issues and Limitations

The following issues are present in this release:

TFS ID	Description
188956	'Send to zipped folder' fails to download ghost files on Windows XP
188248	Folder Listings don't Update when Ghost Files are 'Cut and Pasted' to New Location on Windows XP
188281	Failure to download files on Windows XP
198055	Credential Guard breaks Kerberos Ticket Forwarding
217020	Windows client on Win7 OS no longer connects with TLS1.0 without making changes to the OS configuration

Supported Operating Systems and Technologies

The supported Operating Systems and Technologies are detailed in the compatibility matrix available on the AppSense Support Portal: [link](#).

Required Utilities and Components

Component	Required Utilities and Components
Appliance	<p>The Appliance must have a minimum of 4GB of RAM and 4 vCPUs and needs to be scaled to demand appropriately.</p> <p>The appliance has virtual hard disks that require up to 50GB of storage. The disks are thin provisioned.</p>

Further Help and Information

Information about installing, configuring and using AppSense DataNow can be found in the AppSense DataNow Help, available from the DataNow console or by using this link:
