

Environment Manager 10.1 FR2

Release Notes

Components in this Release

Component	Version
Agent	10.1.566.0
Server	10.1.566.0
Console	10.1.566.0
Database	10.1.106

Important Upgrade Information

This Upgrade section contains important functionality changes that have been introduced in Environment Manager v10.0 and above. Any information that is new to this release is specifically listed as Environment Manager v10.1 FR2.

**Note**

We are including this extended information for the convenience of customers upgrading from an 8.x version.

Windows Server

Environment Manager 10.x Personalization Server requires Windows Server 2008 R2 SP1 or above. Microsoft mainstream support for both Windows Server 2008 and R2 ended on 13 January 2015, but we are continuing to support Windows Server 2008 R2 beyond this date.

Windows Client

Support for Windows XP, Windows Vista, and Windows Server 2008 has been deprecated for the Environment Manager Agent, therefore the Environment Manager 10.x Agent now requires Windows 7 SP1 or above and Windows Server 2008 R2 SP1 or above. Microsoft extended support for Windows XP ended on 8 April 2014, mainstream support for Windows Vista ended on 10 April 2012.

In addition, both Windows 7 SP1 and Windows Server 2008 R2 SP1 must be updated to support SHA-256.

**Note**

For details of Windows 7 SP1 and Windows Server 2008 R2 SHA-256 requirements, please refer to the following [community article](#).

SQL Server

Support for SQL Server 2008 and 2008 R2 has been deprecated, the Environment Manager 10.x

Personalization Server now requires SQL Server 2012 SP2 or above. Microsoft mainstream support for SQL Server 2008 and R2 ended on 8 July 2014.

Please refer to the [Required Utilities and Components](#) section for further details.

Product Licensing

Environment Manager 10.x requires a v2 product license key and this key must be deployed to all endpoints to which the EM v10.x Agent is deployed. The new license key can be installed alongside the existing 8.x license key and should be deployed at the same time or before the EM Agent is deployed. The new license key is deployable via Management Center 10.x and is available from Ivanti Licensing Support.

Further information on Licensing queries is available via the following [community article](#).

Server Configuration Utility (SCU)

The Server Configuration Utility (SCU), which was used to configure instances of the Environment Manager Personalization Server, has been replaced in v10.x with the new Server Configuration Portal and PowerShell cmdlets. It is no longer possible to configure the Personalization Server using the SCU. The new Server Configuration Portal is not able to detect and repair all missing Windows Server and IIS components because it requires some Windows Server and IIS components to be in place first. The functionality to detect all missing Windows Server and IIS components has been moved to the User Workspace Manager Installer. A list of the required Windows Server and IIS components is available in the [Required Utilities and Components](#) section for anyone not using the User Workspace Manager Installer.

IIS Web Sites

Environment Manager 10.x Personalization Server Advanced Installations no longer install into the IIS default Web site, apart from in-place upgrades.

The installation creates a new Web site called Personalization with two configurable bindings, one of which can use host headers on port 80 and another on port 7771. Both are configurable during setup. To use host headers on port 80, DNS servers will need to be updated (refer to install and upgrade guide for further information). In place upgrades, will install into the default Web site, if that is where EMPS is currently installed.

When installing Environment Manager 10.1 FR2 Personalization Server in Evaluation Mode, to simplify the evaluation process we utilize the Default IIS Website and Port 80 in a similar method to previous 8.x installations.

Caution

Care should be taken not to install into the default Web site if other applications are using it, as Personalization Server now uses the root of whichever Web site it is hosted, further information is available in the [Install and Upgrade help](#).

Environment Manager Browser Interface (EMBI)

The Environment Manager Browser Interface (EMBI) has been replaced in v10.x with the Personalization Operations (PersOps) console. PersOps does not provide User Self-Service functionality. Self-Service functionality for end users is provided via the Endpoint Self Service Tool (ESST), which is available for Users via a System tray shortcut on their Endpoint.

User Personalization Data

Introduced in Environment Manager 10.0, Personalization Groups are no longer used as a container for user personalization data. Personalization Groups are now only used for assigning settings to users. If a user falls into a different Personalization Group due to a membership rule changes, or Personalization Group hierarchy changes, or because Active Directory changes, their personalization data moves with them automatically. During the upgrade process, user personalization data that may have been orphaned due to user movement between Personalization Groups in the past will be merged. Where there is a conflict, the most recent user personalization data will be used. Pre-upgrade SQL scripts are included with the Personalization Server installation package to show the impact of any changes prior to upgrade.

File-Based Registry (FBR)

Environment Manager 8.x utilized a file-based registry (FBR) to personalize virtualized registry keys and values. In version 10.x, the FBR mechanism has been replaced with registry hives for efficiency and performance. FBR files created in 8.x versions of Environment Manager will not be upgraded until the global setting

UpgradeFbrToHive is set to True. Once the UpgradeFbrToHive has been set to True (Not Reversible), the FBR files on the endpoints will be converted to registry hives at next logon or application launch. The old FBR files will remain in place for a period of at least 30 days, after which time they will be deleted if they have not been accessed by version 8.x agents.

For customers who want to stage the implementation of the New Registry Hive format from 8.x, you could first enable the UpgradeFbrToHive setting to True after Server Upgrade to 10.1 FR1 and then target specific Endpoints for 10.1 FR1 Agent deployment in controlled manner (via our Management Center for example). Please note that in this scenario, if a user roams between 8.x and 10.1 FR2 Agents, the 8.x Agent will continue using the Legacy FBR and the user settings are partitioned between 8.x FBR & 10.x Hive formats.

New Features

Geo Sync

Users may roam from city to city, or from physical to virtual desktop, but they expect the same personalized experience to follow them.

With the release of Environment Manager 10.1 FR2, our new Geo Sync feature provides users with their personalized desktop experience regardless of their corporate location.

Administrators simply configure which users require their settings to be synchronized to which sites (e.g. branch offices or regional datacenters) and configure a scheduled time for synchronization to occur.

For customers who only want to centrally manage EM Personalization configurations (and not user data), this can also be easily configured.

Supported by accompanying PowerShell cmdlets and APIs, the setup, configuration and monitoring of the Geo Sync feature can be fully automated to comply with enterprise deployment models.

Until now customers with multiple, geographically-distributed sites have relied on SQL Server Merge Replication for synchronization of Personalization data and configurations, which comes with a range of limitations and complexities. With the Geo Sync feature this functionality is built-in, and only requires SQL Standard Edition.

Endpoint Self Service Tool (ESST) Localization

ESST is a System Tray utility that can be configured per Personalization group to allow End Users to manage their User Personalization data. With the release of FR2, the ESST will now localise French, German and Dutch Languages automatically for the user based on the configured Endpoint locale.

Bugs Fixed

The following customer support issues have been resolved in this release:

Problem ID	Title
13516	ADMX / ADML GPO Settings not visible in EM Policy Console (parentCategory)
14032	Personalization override on registry actions fail after v10 upgrade when UpgradeFbrToHive is False
14033	Upgrading a Personalization DataBase to v10 may time out
14056	The EM policy console, incorrectly shows distinct, parallel conditions as being "OR'd" together.
14066	Processes intermittently hang when Personalized
14067	EMUser crash when capturing registry keys which begin with an exclamation mark (!)
14075	Logoff hangs on "Running logoff actions..."
14089	Updating version of a layer within a base configuration failing
14091	Include deleted files option does not work on Folder Copy: Sync with special characters
14112	Edge Browser crashes on W10 15063 build with EM installed
14124	Personalization Server Operations Console hang when Managing Settings for users with large number of files

Known Issues and Limitations

The known issues and limitations are now detailed on community.ivanti.com.

Supported Operating System and Technologies

The maintained Operating Systems and Technologies are now detailed in a [maintained platform matrix](#).

Required Utilities and Components

Note

For details of Windows 7 SP1 and Windows Server 2008 R2 SHA-256 requirements, please refer to the following [community article](#).
