

# Management Center 2018.1

## Release Notes

### Components in this Release

Component	Version
Agent	10.2.112.0
Server	10.2.112.0
Console	10.2.112.0
Database	10.2.0

## Important Upgrade Information

This upgrade section contains functionality changes that have been introduced in Management Center v10.1 or above. Any information that is new to this release will be specifically listed as Management Center 2018.1

---

**Note:** We include this extended information for the convenience of customers upgrading from an 8.x version

---

### Windows Server

Management Center 2018.1 requires Windows Server 2008 R2 SP1 or above. Microsoft mainstream support for both Windows Server 2008 and R2 ended on 13<sup>th</sup> January 2015, but Ivanti continues to support Windows Server 2008 R2 as a maintained platform.

### Windows Client

Support for Windows XP, Windows Vista, and Windows Server 2008 has been deprecated for the Management Center Deployment Agent, therefore the 10.x Deployment Agent (and above) now requires Windows 7 SP1 or above and Windows Server 2008 R2 SP1 or above. Microsoft extended support for Windows XP ended on 8 April 2014, mainstream support for Windows Vista ended on 10 April 2012.

In addition, both Windows 7 SP1 and Windows Server 2008 R2 SP1 must be updated to support SHA-256.

---

**Note:** For details on SHA-256 requirements, please refer to the following [community article](#).

---

### SQL Server

Support for SQL Server 2008 and 2008 R2 has been deprecated; the Management Center 10.x (and above) Management Server now requires SQL Server 2012 SP2 or above. Microsoft mainstream support for SQL Server 2008 and R2 ended on 8<sup>th</sup> July 2014.

Please refer to the [Required Utilities and Components](#) section for further details.

### Server Configuration Utility (SCU)

The Server Configuration Utility (SCU), which was used to configure instances of the Management Server, has been replaced with the new Server Configuration Portal and new PowerShell cmdlets. It will no longer be possible to configure the Management Server using the SCU. The new Server Configuration Portal is not able to detect and repair all missing Windows Server and IIS components, as it requires some Windows Server and IIS components to be in place first. The functionality to detect all missing Windows Server and IIS components has been moved to the User Workspace Manager Installer. A list of the required Windows Server and IIS components is available in the [Required Utilities and Components](#) section for anyone not using the User Workspace Manager Installer.

### IIS Web Sites

Except when performing an Evaluation install or an in-place upgrade, Management Center 2018.1 no longer installs into the default IIS website. It now creates and installs into a new website called Management which can have two bindings specified, one that uses host headers on port 80 and another on port 7751, which are both configurable during setup. To use host headers on port 80, the DNS servers must be updated (refer to the Ivanti *User Workspace Manager 10.1 FR4 Install and Configure Guide* for further information). In-place upgrades install into the default website, if that is where Management Server was previously installed.

---

When installing the Management Center in Evaluation Mode, to simplify the evaluation process we use the default IIS website and port 80 in a similar method to previous 8.x installations.

**Caution:** Care should be taken not to install into the default website if other applications are using it. This is due to Management Center now using the root of the IIS website where it is hosted. Further information is available in the [Ivanti User Workspace Manager 2018.1 Install and Configure help](#).

---

## Bugs Fixed

The following customer support issues have been resolved in this release:

Problem ID	Title
58825	Error in SCP after changing the HTTP listener port & URL prefix for WinRM
64098	Suite Installer may fail to install Management Server
64144	Unexpected behaviour when attempting to move a cloned Deployment Group

## Known Issues and Limitations

The known issues and limitations are now detailed on [community.ivanti.com](http://community.ivanti.com).

## Further Help and Information

Information about installing, configuring, and using our products is available on our [product help](#).

## Supported Operating System and Technologies

The maintained Operating Systems and Technologies are now detailed in a [maintained platform matrix](#).

## Required Utilities and Components

**Reminder:** For details on Windows 7 SP1 and Windows Server 2008 R2 SP1 SHA-256 requirements, please refer to the following [community article](#).

Component	Required Utilities and Components
Database Server	Microsoft SQL Server 2012 SP2 or above – all editions Microsoft SQL Server 2014 SP1 or above – all editions Microsoft SQL Server 2016 or above – all editions Microsoft SQL Server 2017 – all editions
