

Performance Manager 10.1 FR1

Release Notes

Components in this Release

Component	Version
Agent	10.1.250.0
Console	10.1.250.0

Important Upgrade Information

This upgrade section contains functionality changes that have been introduced in either Performance Manager v10.0 or v10.1. Any information that is new to this release will be specifically listed as Performance Manager v10.1 FR1.

**Note**

We are including this extended information for the convenience of customers upgrading from an 8.x version.

Windows Client

Support for Windows XP, Windows Vista and Windows Server 2008 has been deprecated for the Performance Manager Agent, therefore, the Performance Manager 10.0 Agent now requires Windows 7 SP1 or above and Windows Server 2008 R2 SP1 or above.

Microsoft extended support for Windows XP ended on 8th April 2014, mainstream support for Windows Vista ended on 10th April 2012.

In addition, both Windows 7 SP1 and Windows Server 2008 R2 SP1 must be updated to support SHA-256.

**Note**

For details on SHA-256 requirements, please refer to the following [community article](#).

What's New?

Console Rebrand and Renaming

The Performance Manager console has been updated to reflect the new company name of Ivanti (see [here](#) for more details). In addition, components on the endpoint have been updated to reflect these changes.

You may still see references to the 'AppSense' name used in certain areas, such as the Registry or Windows Services. This is to make the transition as least disruptive as possible for existing users of Performance Manager.

Icon Refresh

Having made significant changes to the design of the DesktopNow consoles in version 10, we have listened to feedback and added a splash of colour back into the consoles by refreshing and updating some of the icons used in the Performance Manager console.

Known Issues and Limitations

The known issues and limitations are now detailed on community.ivanti.com.

Supported Operating System and Technologies

The maintained Operating Systems and Technologies are now detailed in a [maintained platform matrix](#).

Required Utilities and Components

Reminder

For details on Windows 7 SP1 and Windows Server 2008 R2 SP1 SHA-256 requirements, please refer to the following [community article](#).
