

Ivanti Endpoint Security 8.6 Update 1

Release Notes

Release Notes

We are pleased to announce the release of Ivanti Endpoint Security (IES) 8.6 Update 1. Read these notes to find out what we have changed and what we've fixed.

End of Life Notice

Note that Ivanti Endpoint Security 8.5 Update 2 and earlier versions are now in self-support. Any customers on 8.5 Update 2 or earlier versions should upgrade now to a supported release.

Product Updates

Export unmatched CVE items

8.6 Update 1 enhances the CVE export feature by enabling you to export unmatched CVE items. For better manageability, when the CVE import does not match all items from the provided list, you can export the list of unmatched CVEs.

Improved deployment interface

We have improved the algorithm for how we append the date to the job name in the deployment wizard. Now changing the time will not replace the job name but will append the new selected date to the current task name.

Updated AV Version

Ivanti Endpoint Security 8.6U1 updates the SDK version for AV. The newly added version is 3.0.1.219. This update brings small fixes for older operating systems.

Bugs Fixed

The following customer support issues have been resolved in this release:

Problem ID	Title
65051	Assigning View AV Centralized Quarantine to user results in error
73501	Auto-Download of critical patches doesn't respect selected configuration
74833	Customer reported vulnerability of crossdomain.xml

74963	During the encryption wizard > add user > add windows user > unable to add domain groups
75415	Server installation fails when password contains *
76868	Agents with AV failing to update from 8.5.0.50 to 8.6.0.10 without a reboot
77223	Endpoints randomly crashing with BSOD from AC after updating to 8.6

How do I obtain 8.6 Update 1?

New Server Installs	Download the installer from the Ivanti Community Downloads page .
