About This Release

Build Information

These release notes support the General Availability (GA) version of Ivanti Patch for MEM 2021.1 Update 2. The GA version can be downloaded from this link:

<https://forums.ivanti.com/s/article/Ivanti-Patch-for-MEM-Download>

The GA build is 2.4.34462.0.

New customers should download and [install Patch for MEM 2021.1 Update 2](#). If you are an existing customer, you should [upgrade to Patch for MEM 2021.1 Update 2](#) using the full installer.

Note: All 2019.x versions and older are no longer supported. If you happen to be using a version older than 2019.1, you must upgrade to 2020.1 Update 4 before upgrading to 2021.1 Update 2.

New System Requirements

- A minimum of 4 GB of RAM on your Microsoft Endpoint Configuration Manager console is now recommended.
- The minimum supported version of Configuration Manager is 1906 for anyone using the new Intune capabilities.
- As of Patch for SCCM 2020.1, a SQL Server database is now mandatory, and each user must have read/write permission to the database. You can use any version of SQL Server that is supported by Microsoft Endpoint Configuration Manager.
- Access to the following URL is required in order to import third-party application to Intune and to automatically update the deployed applications:
<https://application.ivanti.com>

Documentation

New Features and Resolved Issues

2021.1 Update 1

Problem ID	Title
813104	Resolved an issue where the console would crash after importing an application to Intune.
813123	Resolved an issue where a crash would occur after characters were pasted into a password box.
813124	Resolved an issue where an exception was thrown when incorrectly attempting to open the Settings dialog.

2021.1 Update 2

New Features

Added support for third-party update catalogs that use the new v3 format. This provides greater control and flexibility by enabling you to choose which categories within a catalog to synchronize into Configuration Manager. For details, see [What's New](#) in the help system.

Resolved Issues

Problem ID	Title
815125	Resolved an issue where the Data Migration Tool would fail to connect to the MECM Site Server due to an invalid user name.
