## Important Information

Read the following information before continuing with installing or upgrading Ivanti Patch for Configuration Manager.

## Build Information

These release notes support the General Availability (GA) version of Ivanti Patch for Configuration Manager 2024.2. The GA build is 2.5.888.0 and it can be downloaded from the [download page](#).

New and existing customers should download and install Patch for Configuration Manager 2024.2. If you are currently running Patch for SCCM 2020.1 or later, including all versions of Patch for MEM or Patch for Configuration Manager, upgrade to Patch for Configuration Manager 2024.2 using the full installer.

---

**NOTE:** If you are using a version older than 2019.1, you must upgrade to 2020.1 Update 4 before upgrading to 2024.2.

---

## System Requirements

See the [Patch for Configuration Manager help](#) for details of the system requirements.

## What's New

Ivanti Patch for Configuration Manager 2024.2 included:

### Data Migration Tool

The behavior of the **Refresh** button has been optimized.

### Configuration Checker

The Configuration Checker user interface has been improved.

### Enabling and disabling Role-Based Access Control

Users with the **Full Administrator** role can now enable and disable Role-Based Access Control using a check-box on the **General** tab of the Ivanti Patch for Configuration Manager Settings dialog.

### Product grids

Standard keyboard shortcuts have been added to enable the selection and copying of entries in the product grids.

### Single updates appearing in multiple Publish by filters added to multiple Software Update Groups

You can now schedule concurrent **Publish by Filter** tasks that add the same update to different Software Update Groups. For example, if you have two tasks, one using a filter that selects Mozilla updates and another that selects Firefox updates, then these two tasks may include updates that belong in both filters. If you then configure these tasks to add their updates to separate Software Update Groups, the updates that were in both filters are now published and added to both Software Update Groups.

## Bug Fixes

The following customer support issues have been resolved in this release:

Problem ID	Title
99403	Fixed an issue where setting up a recurring (daily) automated task, multiple tasks of the same name were displayed in the calendar grid of the Automation Scheduler.
100017	Fixed an issue where inaccurate contact details for support were displayed.
100021	Fixed an issue where there was a crash when using an alternative credential for Proxy Activation.
