# About MobileIron FilePass

FilePass enables users to share documents securely between MobileIron apps (Docs@Work and Email+) and Microsoft Intune MAM-protected Office 365 apps, while retaining identity coherency. The FilePass app honors Intune App Protection policies just like any app with Intune MAM.

## About these release notes

These release notes contain resolved issues particular to this patch release. For other information about the major release, please see [the release notes for that release](#).

## Resolved issues

For resolved issues identified in previous releases, see [MobileIron FilePass for iOS Product Documentation](#) for that release.

This release includes following resolved issue.

- **DWIC-7370:** Previously when the FilePass app was launched, the app would switch to Mobile@Work for authentication, and sometimes the app might stop responding on the Mobile@Work side. Also, relaunching the app again would switch back to Mobile@Work with the **Secure apps are not available** message or the app would switch back to itself with the **Failed to authenticate user** message. These issues have been fixed.

## Document resources

MobileIron product documentation is available at <https://help.mobileiron.com/s/mil-productdocumentation>.

If you have a MobileIron Cloud deployment, the *MobileIron Cloud Administrator Guide* is also available from your instance of MobileIron Cloud by clicking on the **Help** link in the user interface.

MobileIron Support credentials are required to access documentation in the Support Community.
