MobileIron FilePass 1.4.1 for iOS
Release Notes
for MobileIron Core and MobileIron Cloud

September 28, 2020

For complete product documentation see:
MobileIron FilePass for iOS Product Documentation
About MobileIron FilePass

FilePass enables users to share documents securely between MobileIron apps (Docs@Work and Email+) and Microsoft Intune MAM-protected Office 365 apps, while retaining identity coherency. The FilePass app honors Intune App Protection policies just like any app with Intune MAM.

About these release notes

These release notes contain resolved issues particular to this patch release. For other information about the major release, please see the release notes for that release.

Resolved issues

For resolved issues identified in previous releases, see MobileIron FilePass for iOS Product Documentation for that release.

This release includes following resolved issue.

- **DWIC-7370**: Previously when the FilePass app was launched, the app would switch to Mobile@Work for authentication, and sometimes the app might stop responding on the Mobile@Work side. Also, relaunching the app again would switch back to Mobile@Work with the Secure apps are not available message or the app would switch back to itself with the Failed to authenticate user message. These issues have been fixed.

Document resources

If you have a MobileIron Cloud deployment, the MobileIron Cloud Administrator Guide is also available from your instance of MobileIron Cloud by clicking on the Help link in the user interface.

MobileIron Support credentials are required to access documentation in the Support Community.
