# About Mobile@Work for Android

Mobile@Work for Android is the MobileIron client app that works with MobileIron Core. Device users download Mobile@Work, which automatically configures the device to function in an enterprise environment by enforcing the configuration and security policies that administrators set on MobileIron Core.

Mobile@Work works with MobileIron Core to:

- configure corporate email, Wi-Fi, VPN, and security certificates to create a clear separation between personal and business information.
- install the enterprise app storefront so that device users can browse and install the mobile applications that administrators make available to them.
- allow device users to access web resources and content repositories that sit behind the firewall.

# Resolved issues

This section describes the following resolved issues fixed in the current release of Mobile@Work for Android. For resolved issues provided in previous releases, see the "Resolved issues" sections in the release notes for those releases, available in Mobile@Work for Android Product Documentation.

This release includes the following resolved issues:

- **AC-20303:** Provisioning of Managed Device with Work Profile (COPE) mode and migration from Device Admin mode to Work Profile (PO) mode breaks when Mobile@Work client is in the App Catalog as a managed in-house or public app. This issue has been fixed.
