About the MobileIron Splunk Enterprise app for MobileIron Cloud

The MobileIron Splunk Enterprise app for MobileIron Cloud periodically pulls device; compliance; geo-stats; HIPAA, PCI, and CJIS regulation information; and historical platform and compliance statistics from MobileIron Cloud to a Splunk Enterprise server. The MobileIron Splunk Enterprise app for MobileIron Cloud dashboards are all constructed in simple XML and can easily be modified using the Splunk user interface to fit your requirements.

About these release notes

These release notes contain new feature, resolved and known issues, limitations, and upgrade information particular to this release.

New features summary

This section provides summaries of new features developed for this release of the MobileIron Splunk Enterprise app for MobileIron Cloud. Product documentation describing these features is available in the *Splunk Enterprise app User Guide For MobileIron Cloud*.

REST API Modular Input app no longer required. This release removes the requirement for the third-party REST API Modular Input app, simplifying installation and configuration, and avoiding any issues with Splunk's end of support for Python 2.x, which is a REST API Modular Input app dependency.

Resolved issues

This section describes the resolved issue fixed in this release of the Splunk Enterprise app for MobileIron Cloud.

MISA-216: The Splunk Enterprise app now sends correct values for the start parameter it uses with the GET devices API call. Previously, it was sending incorrect values that exceeded the total number of devices available in the MobileIron Cloud tenant.

Limitations

This section describes the limitations found in the current release of the Splunk Enterprise app for MobileIron Cloud.

AW-54759: On the Windows operating system, the Splunk Enterprise server invokes a server abort message when the administrator attempts to use **Settings > Data Input** to update the associated settings a second time.
