Overview

The Pulse Secure mobile client provides secure connectivity, an intuitive end-user interface, and simplified deployment options. This document describes Pulse Secure mobile client interoperability with mobile platforms (operating systems), mobile hardware devices, and Pulse Secure gateways.

Note: Pulse Secure mobile clients are applications that run on platforms that support application distribution via an Online-application store. These platforms include iOS, Android, Windows (including Windows Phone), and Google Chrome OS. For information about traditional (non-application store) desktop clients (Windows and macOS), see the *Pulse Secure Supported Platforms Guide*.

Mobile Client Versions

The following table describes the Pulse Secure mobile client versions that are covered in this document.

Client Platforms	Pulse Version
iOS	9.1.0
Android	9.1.0
Google Chrome OS	5.2.X
Windows Phone 8.1	1.0.1.8
Windows Phone 10	5.2.X

- Each platform's Pulse mobile client may have an independent version number, feature set and upgrade cadence.
- The mobile client for Windows 8.1 is independent from the "universal" mobile client for Windows 10. These two clients are separate applications at separate Windows Phone Store locations.
- Pulse iOS Client version 9.1.0 is supported on iOS 11.x and above versions, for iOS version 10.x and below, user will be notified by the Appstore to download the last compatible version of Pulse Secure Application.
- Pulse Android Client version 9.1.0 is supported on Android 7.0 and above versions. For users on Android OS version below 7.0, they will be notified by the Play Store to download the last compatible version of the Pulse Secure Application.

Definitions

Qualified Platforms

The platforms listed in the “Qualified” category have been systematically tested by the Pulse Secure Quality Assurance department for the Pulse Secure mobile client versions covered by this Supported Platforms document. These platforms are fully supported.

Compatible Platforms

The platforms listed in the “Compatible” category have not been systematically tested by the Pulse Secure Quality Assurance department for the Pulse Secure mobile client versions covered by this document. Despite this, Pulse Secure expects that the Pulse mobile client will function properly on these platforms based on testing of previous client releases on these platforms. As such, these platforms are also fully supported.

Any platform not listed as either “Qualified” or “Compatible” is not supported by Pulse Secure.
